

DEVICE MANAGEMENT OVERVIEW

Your inventory is the source of truth. Not someone's memory.

How tracking devices go on your vehicles, come off at sale, and why a device left behind creates zero exposure for your dealership.

INVENTORY-DRIVEN, START TO FINISH

MDD syncs directly with your inventory feeds — **vAuto** for used vehicles and **Dealer.com** for new (CDK is also supported). Your DMS decides what's tracked. When a unit is in your inventory, it's in MDD. When it sells, it's out. No manual list to maintain, no human step to forget.

THE DEVICE LIFECYCLE

1

Fresh unit arrives

Your feed automatically adds every new unit to an install report — a running list of vehicles needing a device.

2

Pair in seconds

Your system champion scans the VIN barcode, scans the device barcode, hits save. Inventory data syncs so the team searches by stock #, year, make, model, or trim.

3

Place the device

Clip to the passenger sun visor, glove box, or trunk. We recommend visible placement so devices come off before delivery.

4

Sold & reclaimed

The feed removes the sold unit automatically. Reclaimed devices go into a bin, ready for the next stock unit.

THE QUESTION EVERY DEALER ASKS

What if a device gets left in a sold vehicle?**Automatic removal**

The moment your feed marks a vehicle sold, MDD removes it from the system. No one has to remember anything.

Visibility cut off

Once removed, no team member can see that vehicle's location — even if the device is still inside it.

Device kill

MDD can automatically deactivate any device left in a vehicle. Location data is simply not available.

A forgotten device is a lost piece of hardware — not a liability. Your customer is never tracked. Period.

PROVEN AT SCALE

Vetted by the largest groups in the country.

Penske Automotive and other large national dealer groups have put this exact process through compliance review. It runs today across hundreds of rooftops — including the world's largest Ford dealership, tracking 2,000+ vehicles across multiple lots.

See it in 15 minutes.

We'll walk through the full device lifecycle on a live dealership lot. No commitment.
